

# EnerGreen

## DESCRIPTION

**ENERGREEN** is a nitrogen fertiliser with chelated microelements in liquid form. Formulated for foliar and root application in multiple crops.

Its application is recommended in phases where a quick activation of the crop is required, either due to specific nutritional needs or some kind of stress that limits the absorption of nitrogen.

Its supply of microelements quickly prevents deficiencies caused by their lack.

## FEATURES

The importance of nitrogen lies in creating plant mass and stimulating growth by promoting cell division in particular. It is also involved in a large number of processes. One of the most important of these is the production of chlorophyll, as it is part of chlorophyll, which is necessary for its synthesis.
