

FlorMax

DESCRIPTION

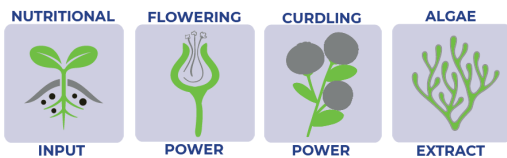

FLORMAX, is a flowering and fruit set INDUCER, specially developed to improve the flowering and fruit set processes. As well as seed germination. Its formulation has been combined with ALGAE of the genus, "Ascophyllum Nodosum", which gives the whole formulation properties that enhance the hormonal processes involved in the flowering and fruit setting phases.

FEATURES

The combination of FLORMAX has a high pollinating and germinating power.

- By lengthening the pollen tube, it encourages fertilisation of the flower.
- Increase pollen grain germination and improve pollen quality.
- Inducing flowering and promoting fruit set.
- Potassium supply, boosting the accumulation of reserves, ideal for staggered flowering, where flowers and recently set fruit coexist.
