

Trueno WSP

DESCRIPTION

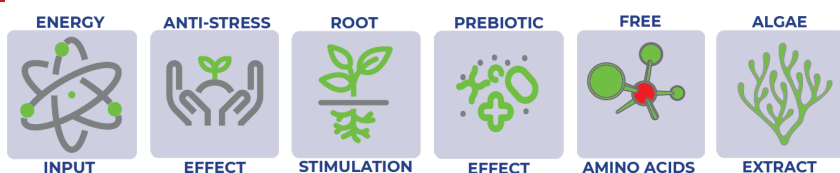

TRUENO, is a powerful biostimulant, whose mission is to enhance the physiological activity of plants. It stimulates the balanced growth of the crop. Its application is recommended in phases in which the when the crop needs a higher energy consumption as well as in situations called "Stress", caused by both Abiotic conditions (temperatures, drought, drought, axophysia, salinity, etc.), as well as by the so-called Biotic situations called "Biotic", which are caused by pests, diseases and weeds, which have a negative effect on crop yields as they slow down the activity of the plants activity.

TRUENO, is formulated with a very high percentage of amino compounds that promote the synthesis of essential proteins for the crop.

BENEFITS AND FEATURES

- **Energy precursor**, activating the growth of stems and roots immediately.
- **Effects on photosynthesis.**
- **They increase chlorophyll levels** by increasing photosynthesis levels.
- **Precursores fitohormonas.** Auxin precursors, and inducers of flowering and growth processes.
- **Direct effect on the development of microbial flora.**
- **Protective actions against stress.** Caused by both biotic and abiotic causes.
