

Dunyorgan[®]

POLVO **Biocom**

DESCRIPTION

DUNYORGAN BIOCUM, is a solid Biological-Composted amendment in the form of POWDER of animal origin with Leonardite. Its main function is to improve the physical, chemical and biological properties of the soils to which it is added.

Their use increases soil fertility levels and therefore production potential.

Its presentation in powder form, favours a fast action in its contribution to the soil.

FEATURES

Its application confers a series of agronomic benefits to the soil and the crop, which favour the productivity and balance of the soil.

- High content of **organic matter** essential for all root-plant processes.
- High percentage of **beneficial micro-organisms** that increase the biological potential of the soil.
- Product **free of pathogens and weed seeds**, thanks to its composting process.
- **High isohumic coefficient**, which marks the amount of humus generated in its transformation.
- Improved **mobilisation, retention and assimilation** of nutrients present in the soil.
- It conditions the soil by **improving structure and aeration**, vital for root development.

PROPERTIES

ORGANIC HUMIC AMENDMENT OF ANIMAL ORIGIN WITH LEONARDITE	Porcentaje
Phosphorus Pentoxide (P2O5) Total	1,1 %
Potassium oxide (K2O) Total	1,2 %
Carbon (C) Organic	16,0 %
Total organic matter	27,5 %
Humic acids	3,5 %
C/N ratio	17,7
Humidity	25-30 %
pH	6,5
Electric conductivity (Low in Chlorine)	14 dS/m

HANDLING AND DOSAGE INSTRUCTIONS

It can be applied at any time during the crop cycle, but ideally **before the start of vegetative activity**. Its presentation in pellet form allows its mechanised application.

Dosage: The use rate is determined according to the starting level of the soil and the crop.

AVERAGE DOSAGE

CROP	Guideline Dose	Mode of application
Fruit and citrus trees	2,5 - 5 Tm/Ha	Apply before the beginning of sprouting
Horticulture	2 - 4 Tm/Ha	Apply during preparatory work
Ornamentals	2 - 4 Tm/Ha	Apply before the beginning of sprouting
Olive tree	2,5 - 5 Tm/Ha	Apply before the beginning of sprouting
Vineyard	2,5 - 5 Tm/Ha	Apply before the beginning of sprouting
Extensive Crops	2 - 4 Tm/Ha	Apply during preparatory work
