

DUNYA Anti Foam

DESCRIPTION

DUNYA ANTIFOAM quickly and effectively eliminates the foam that forms in spray tanks. For various reasons, this foam makes it difficult to properly prepare the mixture for application, so its removal is essential to ensure that the mixture is not altered and the treatment can be performed without difficulty.

FOAM FORMATION

Mulsifiers, solvents, and other substances found in many plant protection products react with water or other products and generally produce foam, which, in addition to being annoying, prevents the product from evenly and perfectly covering the vegetation when treating plants. DUNYA Antifoam quickly and effectively eliminates all these problems.

PROPERTIES

DECLARED CONTENT

ANTIFOAM SOLUTION.

Aqueous solution based on POLYDIMETHYLSILOXANE

HANDLING INSTRUCTIONS AND GENERAL DOSAGES

Application: Simply apply 2 to 3 drops per 100 liters of water to the treatment equipment tank, so that the foam disappears completely and quickly. Recommended dosage: 2.5 mL per 1000 liters of water, rate can be increased to 3-4 ml in case of excessive foaming.
