

OXI-COPPER ROJO

75 WP

DESCRIPTION

OXI-COPPER ROJO is a highly soluble solid deficiency corrector that can be assimilated by crops. Its formulation in the form of cuprous oxide represents the most suitable form for the correction of copper deficiencies in any mode of use.

FEATURES

As it is a very fine product, due to its particle size, it has a high fixing power, penetrating and coating the treated surface better than other forms of coppers.

COPPER acts as a catalyst for numerous enzymatic reactions, promoting nitrogen utilisation and protein synthesis by the plant.

Product SUITABLE for use in organic farming in accordance with Regulation (EU) 2018/848

PROPERTIES

DECLARED CONTENT

DINORGANIC FERTILIZER WITH MICRONUTRIENTS (Cu): Group 1.4.5.1.3b (R.D. 506/2013)	m/m
Copper (Cu) total metal, water soluble (red copper oxide)	75,0 %
Cuprous oxide.	85,0 %

OPERATING INSTRUCTIONS

Foliar application: Avoid treatment at hours of maximum sunshine. Take due precautions in cold and humid areas and on some varieties of fruit trees, vines and other crops due to the phytotoxicity of copper. Treatments should be repeated after heavy rainfall. Do not mix with polysulphides, very acidic or very basic substances. For further information, please contact our technical agronomic department.

OXI-COPPER ROJO

75 WP

RECOMMENDED APPLICATION PER CROP

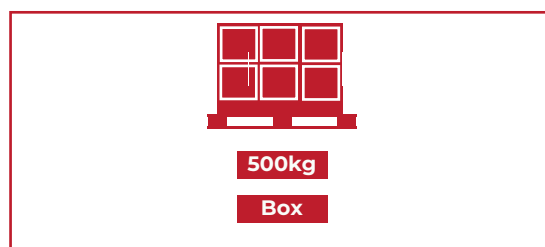

CROP	Dosage/Application
Fruit and citrus trees	200 g/hl
Horticulture	150-200 g/hl
Ornamentals	200 g/hl
Olive tree	200 g/hl
Vineyard	200 g/hl
Citrus fruit	150 g/hl
