

SULFA-COPPER

20 %

DESCRIPTION

SULFA COPPER, is a solid deficiency corrector, highly soluble and assimilable by crops. Especially recommended for Olive, Almond, Citrus, Vine, Stone and Pome Fruit Trees, and Vegetables. It is composed of Cuprocalcium Sulfate as a simple inorganic fertilizer based on micronutrients.

FEATURES

The application of **SULFA-COPPER** corrects and prevents Copper deficiencies in crops, favoring plant growth and development. Plants with Copper deficiencies are more vulnerable; application of Sulfa-Copper provides extra protection by activating plant defenses against fungal and bacterial diseases. COPPER acts as a catalyst for numerous enzymatic reactions, improving Nitrogen utilization and Protein synthesis in the plant.

Product **SUITABLE** for use in organic farming in accordance with Regulation (EU) 2018/848

Copper (Cu) water-soluble		20 %

HANDLING INSTRUCTIONS

Sulfa-Copper is specially prepared for foliar spraying. The application volume must be sufficient to wet all parts of the plant, depending on crop development stage and foliage condition. For application, fill the tank halfway with water and add the required amount of product, keeping the agitator running until the total water volume is completed. Prepare only the amount of solution to be used, avoiding storage of leftover solution for later applications.

SULFA-COPPER

PRECAUTIONS FOR USE

Avoid treatment during hours of maximum sunlight. In citrus, apply at the beginning of vegetation and before summer sprouting. Observe precautions due to Copper's phytotoxicity, especially in humid areas, in some varieties of fruit trees and other crops. It can be used together with most phytosanitary products (except calcium polysulfide).

RECOMMENDED DOSAGE BY CROP

CROP	Dosage/Application
Fruit trees	150 – 250 g/hl
Vegetables	150 – 250 g/hl
Ornamentals	150 – 250 g/hl
Olive tree	150 – 250 g/hl
Vineyard	150 – 250 g/hl
Citrus	150 – 250 g/hl
